SUMMARY

Full stack web developer graduating in December 2026 with solid experience across the stack (React, TypeScript, JavaScript, Python, Node.js), SQL databases, and REST APIs. Builds and ships web applications and data dashboards used by real teams, and integrates AI into development workflows, from AI coding assistants (Claude Code, Codex) to LLM based AI agents. Tested, well documented code, with a focus on making software easier to use and maintain.

EDUCATION

Brigham Young University-Idaho, Rexburg, Idaho **August 2023 – Expected December 2026**

Bachelor of Science in Software Engineering • GPA: 4.0

UNITEC, Mexico City, Mexico **2017 – 2021**

Bachelor's in International Business

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frameworks & Technologies: React, Next.js, Node.js, Express, Vue, REST APIs

Databases: PostgreSQL, SQLite, MongoDB, Supabase

AI & Tools: Claude Code, Codex, AI assisted development workflows, Databricks Genie AI agents, Git, GitHub, Google Apps Script

EMPLOYMENT EXPERIENCE

Software Engineering Specialist — BYU-Idaho, Rexburg, ID (Oct 2024 – Current)

- Build full stack web applications with React, Next.js, Vue, Node.js, and Google Apps Script, owning documentation and standardization across 20+ team projects.
- Design data dashboards that pull course data through REST APIs into SQL and MongoDB databases, showing grades, missing assignments, and progress in one view and cutting instructor review time by about 60%.
- Use AI tools to refine and standardize project documentation for faster handoffs and easier understanding.

Software Engineer Co-Op — Cummins, Inc., Columbus, IN (April – Sep 2026)

- Migrated an internal single page application from Python/Streamlit to React and TypeScript: 80% faster loads, unsaved data loss risk cut from ~50% to <2%.
- Integrated, tested, and documented LLM based Databricks Genie AI agents in an internal platform; used SQL to insert and manage application content and created new tables for the AI agents.
- Migration saves an estimated $2,000 per week in employee time (about $100,000 per year), 4 to 8 hours per user per week.

PROJECTS

- **Build Together** (Svelte, SvelteKit, MongoDB, TypeScript) — Platform where students post project ideas and build teams: email code auth, project listings, applications, invitations, and notifications backed by MongoDB Atlas.
- **WannaWatch** (TypeScript, Vite, Supabase, PostgreSQL) — Movie discovery app with TMDB API integration, user profiles, swipes, and watchlists for authenticated users; includes a small ranking model that learns from ratings.
- **Vaultly** (Next.js, TypeScript, Supabase, PDF.js) — Document management web app with user accounts and in browser PDF viewing.
- **Next Up** (React, JavaScript) — Social platform for discovering and sharing experiences with friends; 1st place at the BYUI 2025 Hackathon.
- **Other: Baby Sleep Tracker, Sacrament Meeting Program, ChatApp, BYUI AI Chatbot, ToDo List, Pomodoro Timer, Shopping List** — see portfolio for more.
