EDUCATION

Bachelor of Science in Software Engineering August 2023 - Expected December 2026
Brigham Young University - Idaho *Rexburg, Idaho*

EXPERIENCE

Software Engineer Co-Op April - Sep 2026
Cummins, Inc. *Columbus, IN*

- Migrated a techno-economic analysis platform from Python/Streamlit to React and TypeScript, translating analytics workflows and user requirements into a maintainable production application.
- Built reusable components and redesigned state management, contributing to an 80% improvement in load performance and a more reliable user experience.
- Resolved critical state-loss defects and implemented database autosave, reducing unsaved-data loss risk from approximately 50% to below 2%.
- Integrated, tested, and documented a Databricks Genie AI agent, enabling users to interact with analysis results directly within the application.
- Built usage-monitoring dashboards and data workflows to evaluate application and AI-assistant activity and support data-informed product decisions.
- Collaborated with engineers and business users to understand requirements, debug issues, test functionality, and ship improvements in an Agile environment using Git and GitHub.
- Shipped global search, model visualization, contextual notes, input automation, and in-app support based on feedback from engineering and business users.

Software Engineering Student Specialist Oct 2024 - Present
BYU-Idaho *Rexburg, ID*

- Develop and maintain 5+ web applications and internal tools using JavaScript, HTML, CSS, REST APIs, and data-driven backend workflows.
- Build and troubleshoot full-stack features for data tracking, dashboards, authentication, reporting, and automation, reproduce reported issues and implement reliable solutions.
- Collaborate with developers, faculty, and users to capture requirements and explain application behavior, create JavaScript and Google Apps Script automations that reduce repetitive work.
- Manage source code and branches with Git and GitHub, document technical processes and solutions to support maintenance and knowledge sharing.
- Build JavaScript and Google Apps Script automations that reduce repetitive work and improve the accuracy of internal processes.
- Document technical processes and application behavior to make systems easier for developers and users to maintain and support.

TECHNICAL SKILLS

- Languages: Python, SQL, TypeScript, JavaScript, HTML, CSS
- Backend &, Data: Node.js, Express.js, PostgreSQL, REST APIs, database workflows, data integration
- Frontend: React, Vite, responsive web development, component-based architecture, state management
- Testing &, Development: Debugging, software testing, API testing, error handling, code reviews, technical documentation
- Tools &, Workflow: Git, GitHub, Visual Studio Code, Jira, Agile/Scrum, version control, Google Apps Script
- AI &, Analytics: Databricks, Databricks Genie AI integration, analytics workflows, usage monitoring

PROJECTS

- **ChatApp** - Real-Time Messaging Application - Node.js, Express.js, PostgreSQL, JavaScript: Built a full-stack private messaging application with user authentication, live user tracking, and direct messaging.

- **Damazon** - Full-Stack E-Commerce Platform - Node.js, Express.js, EJS, PostgreSQL: Developed a full-stack e-commerce application with role-based access for administrators, moderators, and buyers.

- **Next Up** - BYU-Idaho Hackathon, First Place - React, JavaScript, JSON: Collaborated with a team to design and build a React-based social platform for discovering, planning, and sharing experiences.
